

Common Mistakes

Common Mistakes	Hints and Solutions	References Link
Failing to switch to the alert	Ensure you've utilized <code>switchTo().alert()</code> to switch to an alert using Selenium WebDriver. An <code>UnhandledAlertException</code> is thrown when an alert is not properly handled or appears unexpectedly during interaction. Verify that you've switched to the alert appropriately when it appears.	Alert Doc
Handling an alert which is not present	To avoid a <code>NoAlertPresentException</code> , confirm an alert's presence before trying to switch to it using <code>switchTo().alert()</code> . Always verify the alert's existence before interacting with it. Implement conditional checks to ensure an alert is present before attempting to switch to it.	Alert Doc
