

**Common Mistakes for Assignment <3>: Palindrome**

Common Mistakes	Hints and Solutions	References Link
Incorrect initialization of loop variables	Properly initialize loop variables before starting the loop and use the correct variable, 'input,' to avoid unintended outcomes as it decreases in each iteration.	<a href="#">Stack Overflow</a>
Lack of understanding to use % (mod) and / (div) operators	% operator gives the remainder and / operator gives the quotient	<a href="#">Geeks for Geeks</a>
