

Common Mistakes

Common Mistakes	Hints and Solutions	References Link
Not handling multiple windows properly	Use <code>getWindowHandles()</code> to get all window handles and <code>switchTo().window()</code> to switch to a specific window.	Windows Doc
NoSuchWindowException	This exception occurs when attempting to switch to a window that is not available or closed. Ensure you have the correct window handle and verify window availability before switching. You must switch back to a valid window handle in order to continue execution.	Exception Doc
Failure to verify the page title	Use <code>driver.getTitle()</code> to get the title of the page and compare it with the expected title to verify.	Getting page title Doc
