Common Mistakes for Assignment <3>: Finding Missing element on array

Common Mistakes	Hints and Solutions	References Link
Not sorting the array before processing	Sort the array using Arrays.sort() before looping through it.	
Not initializing the loop correctly	Initialize the loop correctly, starting from arr[0] to arr.length.	
Not correctly checking for missing elements	Use a boolean variable to check if the element is found in the array.	
Not breaking the iteration when needed	Use a "break" statement to exit the loop when the element is found.
